FOREWORD

The concepts of rural and urban settlements are imbibed in Indian Censuses right from the late nineteenth Century when the Census Operation was started in 1881 on a synchronised basis for the country as a whole. Further, in order to facilitate the presentation of urban data a six-fold classification - solely based on population size-classes has been followed since then. Apart from this, cities and towns, as is well known, can be classified in a number of ways by considering a host of indicators derived from population statistics viz., sex composition, extent of population growth, level of literacy and education work participation etc. and also on the basis of locational, industrial and employment statistics. Several attempts have been made in the past to classify Indian cities. Similarly, in certain cases, all the urban settlements of a given region/state have been classified on the basis of one or more than one of the above stated indicators with the help of simple to complex statistical tools. However, a composite classification of all cities and towns of India based on the predominant function of such places in 1961 was attempted for the first time by Dr. Ashok Mitra, my illustrious predecessor-in-office and the Census Commissioner for the 1961 Census. This was based on nine-fold industrial classification of workers available for each city and town. This exercise was repeated again in 1971 with some modifications. But due to non-availability of requisite data up to UA/town level, it was not possible to present a functional classification of urban places in 1981.

Now, with the availability of nine-fold industrial classification for each urban agglomeration (UA)/town, this exercise has been taken up as part of the plan scheme on 'Distribution of Infrastructural Facilities in Different Regions and Levels and Trends of Urbanisation.' Under this scheme, which is continuing since the 6th Five Year Plan, studies on various aspects viz., analysis on levels and trends of urbanisation, urban sprawl, distribution of infrastructural facilities in rural areas, small towns and slums of class I and II towns have already been completed. It is now envisaged to take up similar types of studies based on 1991 census data with a view to providing a comparative analysis on some of the aspects studied earlier.

In order to facilitate analysis of changes in functional character of urban settlements between 1971 and 1991, the methodology adopted earlier in 1971 has been used without any modification. Using this methodology, all the UAs/towns having 40 percent or more workers in one of the five sectors namely, 'Primary', 'Industry', 'Trade', 'Transport' and 'Services' have been classified under relevant 'mono-functional' category. Out of the remaining, those places having 60 percent or more workers in two sectors (having largest-percentage) are classified under relevant 'bi-functional' category. Lastly, in case of remaining UAs/towns, three sectors having largest percentages are combined and such UAs/towns are classified under relevant 'multi-functional' category. Apart from this, with a view to revealing the special character of certain places in terms of concentration

of workers in one of the four activities viz., 'Forestry and Fishing', 'Mining and Quarrying', 'Artisan' (i.e manufacturing in household, industry) and 'Construction', all the places having at least one-fourth of the workers in one of these activities have been classified under relevant functional sub-type.

The study was conducted by Dr. M.K. Jain, Deputy Registrar General (Social Studies). For the classification of UAs/towns, necessary software was developed by Ms. Arti Agarwal, Data Processing Assistant, under the able guidance of Sri B.L. Jain, Dy. Director (EDP). Using this software, inset and appendix tables were generated on personal computer. In this task, Dr. Jain was assisted by Sri.C.Chakravorty, Dy. Director Census Operations and Sri.Rajender Prasad, Statistical Assistant. Besides, a number of other staff members were associated with this study in different capacities, I thank all of them.

A.R.NANDA

INTRODUCTION

The concept of town and village for presenting population statistics in the Indian censuses is present right from the inception of the census operation in India. It is a usual practice to list out places which for census purposes will be treated as urban and by eliminating certain urban places which will be treated as rural. This is a preliminary step which is taken every time at the beginning of each census. Further, data pertaining to towns is customarily presented under broad size class categories depending on the population size of the population enumerated in each urban place. This practice is continuing since 1881. After the first census of post independence era, an attempt was made in 1951, in some States to classify towns according to their functions relying on the personal appraisal and local knowledge of the Census Superintendent himself. At the later census, a composite classification based on the predominant function of a town was attempted by Ashok Mitra, the then Registrar General & Census Commissioner of India in 1961. This was based on the industrial classification of all workers into nine categories adopted at the 1961 and 1971 censuses which provided a basis for the functional classification of the towns*. Due to non-availability of town-level data on industrial classification of workers into nine industrial categories, this exercise could not be taken up at the 1981 census.

With the restoration of earlier practice of providing village/town level data on classification of workers into nine industrial categories in 1991, it has now become feasible again to classify all the urban places in terms of their functional character. This has been attempted in the present paper by following the same procedure as adopted at the earlier two censuses with slight modifications made in it by readjusting the industrial categories into five broad economic sectors.

-
- * (i) Ashok Mitra; A Functional Classification of India's Towns, (presented at All-India Seminar on Population, Institute of Economic Growth), New Delhi, March 12-14, 1964.
- (ii) Ashok Mitra et. al. : Shifts in the Functions of Cities and Towns of India 1961-71 - An ICSSR/JNU Study.

The methodology adopted for this classification is similar to that adopted at the 1971 Census and is as follows:-

- (1) To begin with, the nine industrial categories of workers adopted for the presentation of 1991 Primary Census Abstract data were grouped into the following five sectors:-

<u>Sector</u>	<u>Industrial category</u>
Primary Activity	I Cultivators
	II Agricultural labourers
	III Livestock, forestry, fishing, hunting, plantations, orchards and allied activities
	IV Mining and quarrying
Industry	V Manufacturing, processing, servicing and repairs
	(a) Household industry
	(b) other than household industry
	VI Construction
Trade	VII Trade and Commerce
Transport	VIII Transport, storage and communication
Services	IX Other services

- (2) For each UA/town* the percentage of total main workers in each of the five sectors was worked out.
- (3) The functional category of the UA/town was then determined as follows:- (i) If workers in one sector constituted 40 per cent, or more, the UA/town was classified in the relevant Mono-functional category; (ii) If the percentage in one sector was less than 40 per cent, two sectors having the largest percentages were combined to see if they together constituted 60 per cent or more. If so, the UA/town was classified in the relevant Bi-functional

* All the urban agglomerations, in the present study, have been treated at par with towns on the basis of their aggregate population size.

category; (iii) If no two sectors added up to 60 per cent or more, three sectors having the largest percentage were combined and the UA/town was classified in the relevant Multi-functional category.

- (4) In addition to the determination of the functional category of each UA/Town, in certain cases where, at least 1/4th workers were engaged in one of the four activities viz., (a) forestry/fishing (including livestock, plantation etc.), (b) mining and quarrying, (c) manufacturing in household industry and (d) construction, the respective UAs/Towns have been classified in the relevant sub-functional categories provided such an activity happened to be the first or second leading function of those UAs/Towns*.

Using the procedure outlined above, all the 3,697 urban agglomerations/towns of India (excluding Jammu & Kashmir) have been classified into different functional categories on the basis of percentage distribution of workers into broad industrial sectors. This classification of UAs/towns has been presented in Appendix-Tables wherein the population and functional category along with percentage of workers in the relevant category of all urban places (including constituent towns of urban agglomerations) have been shown.

With a view to bring out salient features in regard to dispersal of the UAs/towns and their population according to different functional categories, a detailed analysis has been presented in different sections at two levels. That is, at first the dispersal of number and population of UAs/towns classified into five main functional categories i.e., primary activity, industry, trade & commerce, transport & communication and services as well as into three broad types namely, 'mono, bi and multi-functional' have been analysed by considering the size-class distribution of such places. This is followed by an analysis of number and population of UAs/towns according to functional categories/types by States and Union Territories. The analysis presented in different sections of this Report covers the following aspects:-

- (a) Size-class distribution of urban agglomerations/towns and their population
- (b) Distribution of urban agglomerations/towns and their population according to broad functional types
- (c) Extent of functional diversification among urban agglomerations/towns

* Functional category of each UA/Town has been ascertained by considering percentages rounded upto 2 decimal points.

- (d) Functional types of urban agglomerations/towns having primary activity as the predominant/leading function
- (e) Functional types of Urban agglomerations/towns having industry as the predominant/leading function
- (f) Functional types of Urban agglomerations/towns having trade as the predominant/leading function
- (g) Functional types of urban agglomerations/towns having transport as the predominant/leading function
- (h) Functional types of urban agglomerations/towns having services as the predominant/leading function
- (i) Urban Agglomeration/Towns classified under different functional sub-types.

Section-I

DISTRIBUTION OF URBAN AGGLOMERATIONS/TOWNS AND THEIR POPULATION BY SIZE-CLASS

Urban agglomerations and towns as per the 1991 Census* are defined as follows:

- (i) Towns: (a) All statutory towns i.e., places with a municipality, corporation, cantonment board or notified town area committee, etc.
- (b) All other places which satisfy the following criteria :
 - i) minimum population of 5,000
 - ii) at least 75 percent of male working population engaged in non-agricultural pursuits ; and
 - iii) a density of population of at least 400 persons per Sq.Km.

Besides, the Directors of Census Operations in States/Union Territories were allowed to include, in consultation with the concerned State Governments/Union Territories Administrations and the Census Commissioner of India, some places having distinct urban characteristics as urban even if such places did not strictly satisfy all the criteria mentioned under category(b) above".

(ii) Urban Agglomeration: An Urban Agglomeration on the other hand denotes "a continuous urban spread and normally consists of a town and its adjoining urban outgrowths(OGs), or two or more physically contiguous towns together with contiguous well recognised outgrowths if any, of such towns".

The 'outgrowths' forming parts of urban agglomerations are "fairly large well recognised railway colony, university campus, port area, military camp, etc..., which might have come up around a core city or statutory town.....since such areas are already urbanised.... although a few of them may not satisfy some of the prescribed eligibility tests to qualify themselves as independent urban units.... have been termed as outgrowths(OGs) and reckoned along with the town".

* Census of India, 1991, Paper-1 of 1992 series-1, India, Final Population Totals, pp. 3-4

Size-class Distribution:

There were 3697 UAs and towns wherein approximately 216 million persons were enumerated at the time of 1991 Census in India (excluding Jammu and Kashmir where Census was not held in 1991). As regards, size class break-up of these places it may be seen from the figures given below that 300 UAs/cities in India had one lakh or more population followed by 345 which had a population varying from 50,000 to 99,999. Further, 944 UAs/towns had 20,000 and more but less than 50,000 population. The remaining 2108 places had less than 20,000 population or in other words were the small towns. The proportion of urban population living in such places as expected was the maximum, i.e., almost 65% in the first size class category followed by 11 and 13 per cent in the next two categories and approximately 11% enumerated in the remaining 3 categories of small towns. It thus indicates that approximately 2/3rd of the India's total population lived in cities followed by slightly less than 1/4th in medium towns and more than 1/10th in the small town categories.

Table 1: Number and population of UAs/Towns classified into broad size class categories, 1991

Size class	Number	Population (in '000s)	Percentage of Population
I	300	140,067	64.91
II	345	23,629	10.95
III	944	28,688	13.30
IV	1,171	17,074	7.91
V	739	5,651	2.62
VI	198	663	0.31
All*	3,697	215,772	100.00

* Excluding Jammu & Kashmir where, Census was not held in 1991.

Inter-State/UT variation:

State/UT wise distribution of UAs/Towns and percentage of urban population as reported in Table-1 reveals that the maximum concentration (roughly 82%) of urban population in the first size class category was found in West Bengal among the major States followed by Maharashtra where more than 3/4th of

the population lived in this category which comprised all UAs/cities having one lakh and more population. Besides these two States, only in Andhra Pradesh, Gujarat, Kerala and Tamil Nadu among the major States, 2/3rd and more population lived in such places whereas, in some other major States such as Assam, Madhya Pradesh and Orissa this proportion was found to be 50% or less. As against this, all the smaller States and UTs barring a few revealed a relatively higher extent of concentration of urban population in small towns with less than 20,000 population.

Section - II

DISTRIBUTION OF URBAN AGGLOMERATIONS/TOWNS AND THEIR POPULATION ACCORDING TO FUNCTIONAL TYPES

A classification of the UAs/towns according to broad types as given in Table-3 indicates that almost half of the UAs/Towns of India had primary activities either as the predominant or the leading economic function. This was followed by industry and services which had more or less equal number of UAs/Towns, i.e., 723 and 736 respectively. Of the remaining two categories, trade accounted for 460 UAs/Towns whereas the transport accounted for 22 UAs/Towns only.

The percentage distribution of population living in such places indicates that, in spite of the fact, nearly half of the UAs/Towns had primary activities either as the predominant or the dominant function, the proportion of population living in such places was however, substantially low, i.e., approximately 16% whereas, nearly half of the urban population was enumerated in 1/5th of the total number of UAs/Towns which had industries either as the predominant or the leading function. Of the remaining 3 categories, while more than 1/4th (approximately 27%) of the urban population was enumerated in 1/5th of the total UAs/Towns having services as the predominant or leading function, 7% was enumerated in 12% of the urban places having trade as the predominant or the leading economic activity. Lastly, a very negligible proportion of population was enumerated in the UAs/Town classified as transport towns.

Table -3 : Classification of UAs/Towns* according to Predominant/Leading Function(s) 1991

Predominant\ leading function	Number	Population (in '000s)	Percentage (%)	
			No.	Population
Primary Activity	1,756	34,278	47.50	15.85
Industry	723	107,225	19.56	49.69
Trade	460	15,748	12.44	7.30
Transport	22	808	0.55	0.37
Services	736	57,713	19.91	26.75

* Excluding Jammu & Kashmir where, Census was not held in 1991.

I. Size-class differentials in the functional types of UAs/towns

As regards the size-class differentials in the UAs/towns classified into broad functional categories, it may be seen from the figures presented in Table-4 that the largest proportion (i.e., 40%) of UAs/towns having 'primary activity' as the predominant/leading function was noted in size class IV comprising UAs/towns with 10,000 and more but less than 20,000 population. This was followed by categories III and V each having 1/4th or more of the total number of UAs/towns with primary activity as the predominant or leading function. As against this, the percentage of cities among such UAs/towns was the lowest (i.e., 1% only). Further the proportion of population living in such UAs/towns was the maximum in size- class III which accounted for little less than 40% of the total population of the UAs/towns having primary activity as the predominant/leading function. This was followed by size- class IV accounting for little less than 30% of the population of such UAs/towns. The percentage distribution of the population of UAs/towns having primary activity as the predominant/leading function was more or less uniform, i.e., around 10% in the remaining size-class categories except the last one comprising UAs/towns with less than 5,000 population which accounted for slightly less than 1% of the population of towns falling under this functional type.

In case of UAs/towns having 'Industry' as the predominant/leading function, nearly half of the UAs/towns were found in size-class categories III and IV followed by size-classes I and V. Further the proportion of population in the UAs/towns having industry as the predominant/leading function was the maximum, i.e., 85% in size-class I. In the next two categories, it was found to be 6 and 5 per cent whereas in the last two categories, it was even less than 1%.

The UAs/towns having 'trade' as the predominant/leading activity were largely concentrated in size-classes III and IV which together accounted for approximately 59% of such places. These were followed by size-classes II and V each accounting for 15% of the UAs/towns having this function. The proportion of population of such towns in the first three size-classes varied from more than 25% in size-class III to less than 30% in size-class II. Whereas, in the last two categories, this proportion was substantially low, i.e., less than 5%.

In the next functional category where only 22 UAs/towns had 'transport' as the predominant/leading function, more than 80% such UAs/towns (i.e. 18) were found in size-class categories III-V. Nearly 1/3rd of the population of such towns was however, enumerated in 1 city/UA only followed by approximately 1/4th in 2 towns belonging to size-class II and little more than 1/4th in 3 towns belonging to next size-class category.

Lastly, the proportion of UAs/towns having 'services' as the predominant/leading function revealed less amount of variation in the first five size-class categories where it varied from approximately 15% in size-class V to almost 23% in size-class III. But, the proportion of such UAs/towns' population was quite high, i.e., little more than 70% in size-class I followed by size-class II which accounted for another 15%. Last 3 size-class categories, on the other hand, accounted for just little more than 5% of the population of such UAs/towns.

It may thus be inferred that a substantially large proportion of population of UAs/towns having 'industry' or 'services' as the predominant/leading function was accounted by the UAs/towns having hundred thousands and more population and thus classified into size-class I. As against this, nearly 70% of the population belonging to UAs/towns having 'primary activity' as the predominant/leading function was distributed in size-class categories III and IV followed by categories II and V each accounting for 10% of the population. Further, the distribution of population of the UAs/towns having 'trade' or 'transport' as the predominant/leading activity revealed less amount of variation in first three size-class categories which together accounted for more than 80% of the population of UAs/towns having these functional types.

II. Inter-State variations in the broad functional types of UAs/Towns and their population

Distribution of UAs/Towns and their population among the States and Union Territories according to the five aforesaid predominant/leading functions as reported in Table-5 reveals a lot of variation. For example, it is evident from the figures given in this Table that more than half of the UAs/Towns of Andhra Pradesh, Bihar, Karnataka, Madhya Pradesh, Maharashtra and Uttar Pradesh among the major States had 'primary activity' as the predominant/leading function. Further, Manipur and Mizoram among the smaller States/UTs, had more than 85% of the UAs/towns (i.e., 26 and 20 out of 30 and 22 respectively) had 'primary activity' as the predominant/leading function. The proportion of urban population living in such UAs/towns was, however, quite low in the major States and it varied from around 5% in Assam, Himachal Pradesh and West Bengal to 36% (i.e., more than 1/3rd) in Bihar followed by Andhra Pradesh, Madhya Pradesh and Orissa only where, more than 1/5th of the urban population was living in such places. Among the smaller States, Manipur (55%) and Mizoram (approximately 47%) and Daman & Diu (approximately 43%) returned a substantially large proportion of urban population living in such places.

In the next functional category 'industry', the proportion of UAs/towns was substantially low in all the major States except Kerala where about half of the urban places were found to be having 'industry' as the predominant/leading function followed by Gujarat and Tamil Nadu only which had more than 1/3rd of the towns falling under this category. As regards the proportion of urban population living in UAs/towns having 'industry' as the predominant/leading function, a substantially high proportion of population living in such urban places was found in a number of these States. For example, in Maharashtra 3/4th of the urban population was enumerated in the UAs/towns having this functional type. Apart from this, in Gujarat, Tamil Nadu and West Bengal, this proportion was more than 70% followed by Karnataka and

Kerala which had 66% and 57% of urban population living in such places. As against this in Bihar, Himachal Pradesh and Orissa, the proportion of urban population living in such places was even less than 1/5th, i.e., 13.7 and approximately 17 per cent only. Same was the case with the other smaller States/UTs where it was found to be less than 20%. Moreover, in most of these States/Union Territories not a single UA/town was classified into this category. Only exception to this was noted in Dadra and Nagar Haveli which had only 1 town that belonged to this category.

The distribution of UAs/towns having 'trade' as the pre dominant/leading function may be seen from the figures given in this Table, reveals that in a large number of States/UTs this number was even less than 10. Some major exceptions to this trend were noted in Uttar Pradesh (123), Punjab (42), Assam(35), Rajasthan(33), West Bengal(30) and Haryana(29). Further, the proportion of urban population living in such places was less than 10% in all major States/UTs except Assam, Haryana, Punjab and Uttar Pradesh. Same was the case in respect of smaller States and Union Territories except Goa (11%), Sikkim (32%) and Daman & Diu (57%).

Twenty two UAs/towns belonging to next functional type, i.e., 'transport' were distributed in a few States/Union Territories, namely, Assam, Bihar, Gujarat and Uttar Pradesh each having 3 such places, Andhra Pradesh, Maharashtra, Orissa and West Bengal each having two such places followed by Madhya Pradesh and Lakshadweep each having one UA/town under this category. The proportion of urban population living in such places was the maximum, i.e., more than 1/4th in Lakshadweep whereas, in all the remaining States/Union Territories, it was less than 5%.

Number of UAs/towns in the last functional category, i.e., 'services' varied considerably, i.e., from one each in Sikkim, Andaman & Nicobar Islands and Chandigarh to more than 100 in Uttar Pradesh, 82 in Madhya Pradesh, 59 in Maharashtra and 51 in Bihar. As regards the proportion of urban population living in such places, it is noted that among the major States, it varied from less than 10% in Karnataka and Tamil Nadu to more than 50% in Assam, Himachal Pradesh and Orissa where it was slightly less than 60%, about 83% and 55% respectively. Apart from these States, Andhra Pradesh, Bihar, Haryana, Madhya Pradesh, Punjab, Rajasthan and Uttar Pradesh returned 1/4th or more of the urban population living in such places. Further, all the smaller States/Union Territories (excluding Dadra & Nagar Haveli and Daman & Diu) had more than 50% of their urban population living in the UAs/towns classified under this category except Manipur (41%). Moreover, in Nagaland & Nicobar Islands, Chandigarh and Delhi almost entire urban population lived in such UAs/towns followed by Arunachal Pradesh, Meghalaya and Tripura where more than 90% urban population lived in such UAs/towns.

Section - III

EXTENT OF FUNCTIONAL DIVERSIFICATION AMONG URBAN AGGLOMERATIONS/TOWNS

After having analysed the distribution of UAs/towns and their population according to broad functional types, i.e., as per predominant/leading economic activity in the preceding Chapter, it is intended here to analyse the extent of functional diversification of urban places in India by considering the percentage distribution of main workers into first three leading economic activities in each UA/town. As explained earlier in the Introduction, those UAs/towns having 40% or more workers engaged in one of the five activities, i.e., primary activity, industry, trade, transport and services have been treated as 'mono-functional'. In other words, such UAs/towns have been regarded as the places having concentration of workers in a given type of economic activity than the remaining urban places. Out of the remaining, those UAs/towns which had 60% and more workers in two of the five activities have been termed as 'bi-functional' UAs/towns and these have been regarded as having relatively a moderate diversified functional base. Lastly, by virtue of the fact that 60% and more workers in the remaining UAs/towns are found to be engaged in three activities, they have been termed as 'multi-functional' UAs/towns and were thus regarded as having highly diversified functional base.

Figures given in Table-6 pertaining to the distribution of number and population of the urban places according to mono, bi and multi-functional categories reveal that nearly half of the UAs/towns accounting for more than one-third of urban population were classified into 'mono-functional' category. These were followed by about 1/3rd of the urban places comprising approximately 28 per cent of urban population classified under multi-functional category. Whereas, the second category of bi-functional UAs/towns comprised less than 1/5th of the UAs/towns and more than one-third of urban population.

As regards the size-class distribution of mono, bi and multi-functional UAs/towns and their population, it may be noticed from the given Table that out of 1,796 UAs/towns having mono-functional character, 74 were having hundred thousands and more population each and these accounted for 60% of the population of the mono-functional UAs/towns. 94 mono-functional UAs/towns accounting for 8% population of such places were classified into next-size class category followed by a substantial increase in the number of such places in the next two size-class categories which together accounted for slightly more than 1/4th of the population of such places. Remaining 618 (i.e., more than 1/3rd) mono-functional UAs/towns were classified in the last two categories of the small towns each having less than 10,000 population and the proportion of population accounted by such places was slightly above 5% only.

Ninety nine out of 705 bi-functional UAs/towns were classified into size-class 1 and these accounted for more than 80% of the population of such places. In the remaining size-classes this number varied from 42 in the last size-class to 217 in size-class IV. Whereas, the proportion of population living in size-classes II to VI reduced gradually from 6% in size-class II to almost negligible in the last size-class category.

Lastly, out of 1,196 multi-functional UAs/towns, 127 belonging to size-class I accounted for little less than half of the population of such places. These were followed by 179 and 424 in the next two categories which accounted for 20 and 22% of the population of such places. Thus, UAs/towns of first three size-classes together accounted for 90% of the population of the multi-functional UAs/towns. Whereas, remaining 10% were distributed in 466 places belonging to the last three size-class categories.

Excluding Jammu & Kashmir where, no Census was held in 1991

State/UT-level variation in the pattern of distribution of UAs/towns and their population into mono, bi and multi functional categories as visualised from Table-7 indicates that more than half of the UAs/towns of some of the major States, viz., Bihar, Karnataka, Madhya Pradesh, Orissa, Tamil Nadu and Uttar Pradesh

were classified under mono-functional categories. Proportion of urban population living in such places among these major States was considerably higher (more than 60%) in Maharashtra and Bihar followed by Karnataka having approximately 52% of urban population classified under this category. As against this, in Andhra Pradesh, Assam, Kerala, Rajasthan and West Bengal, though the number of UAs/towns classified under this category was comparatively large, proportion of urban population was significantly low (less than 1/5th). Further, UAs/towns of the smaller States/UTs were mostly having mono-functional character and in some of these States/UTs, such as Arunachal Pradesh, Mizoram, Andaman & Nicobar Islands and Chandigarh, all the UAs/towns were classified under this category. These were followed by Manipur, Nagaland, Sikkim and Tripura where, a majority of the UAs/towns accounting for 65% to 95% of urban population were having mono-functional character.

Number of UAs/towns classified as bi-functional towns were more than 1/3rd in Assam, Himachal Pradesh and Punjab, whereas the proportion of urban population classified under this category was more than half in Assam, Tamil Nadu, West Bengal followed by Andhra Pradesh, Haryana, Madhya Pradesh, Punjab, Rajasthan and Uttar Pradesh where it varied from more than 1/3rd to less than a half. Apart from these, in Union Territory of Dadra & Nagar Haveli entire population was living in towns having bi-functional character followed by Delhi having 4 UAs/towns accounting for almost entire population and Pondicherry having 2 towns accounting for almost 80% of urban population were found in this category.

Lastly, half of the UAs/towns of Kerala and West Bengal were having multi-functional character followed by Andhra Pradesh, Gujarat, Karnataka, Maharashtra and Rajasthan. Proportion of urban population classified under this category was the maximum in Kerala (slightly more than 80%). Apart from this, only in some of the major States such as Andhra Pradesh, Gujarat, Karnataka, Madhya Pradesh, Orissa, Punjab and Rajasthan it varied from more than one-fourth to less than a half. Amongst the minor States/UTs, only in Daman & Diu, entire population was living in two towns classified under this category followed by Goa where 16 out of 26 UAs/towns accounting for 62% of urban population were found in this category.

Section - IV

FUNCTIONAL TYPES OF URBAN AGGLOMERATIONS/TOWNS HAVING PRIMARY ACTIVITY AS THE PREDOMINANT/LEADING FUNCTION

A classification of the UAs/towns having primary activity as the predominant or leading function into three broad categories, namely, mono, bi and multi-functional is as follows:

Table -8: Number and % of Mono, Bi and Multi-functional UAs/Towns having Primary Activity according to Size-class, in India* 1991

Size Class	Mono-functional		Bi-functional		Multi-functional	
	No.	%Pop.	No.	%Pop.	No.	%Pop.@

* Excluding Jammu & Kashmir where, Census was not held in 1991.

@ P.C. w.r.t. total pop. of the UAs/Towns having primary activity.

It is evident from the figures presented in the above Table that 1140, i.e., approximately 65% of the UAs/towns were having 40% and more of their workers engaged in primary activity and were thus classified into 'mono-functional' category. These places accounted for nearly 60% of the population of UAs/towns having primary activity as the predominant or the leading function. Number and proportion of population of UAs/towns having primary activity into next two categories, namely, 'bi-functional' and 'multi-functional' categories were substantially low, i.e., 254 and 362 whereas the percentages were approximately 14% and 27% respectively. It thus shows that a majority of the UAs/towns having primary activity had mono-functional character followed by the 'multi-functional' category which, however,

accounted for 1/5th of such places comprising more than 1/4th of the population of UAs/towns having primary activity.

The size class and break-up of UAs/towns having primary activity as the predominant/leading function as presented in the given Table reveals that most of such places were either medium or small towns each having population varying from 10,000 to 50,000 and thus classified into size class categories III and IV. Apart from these, size class V comprising urban places each having a population between 5,000 to less than 10,000 accounted for nearly 30% of the mono-functional UAs/towns having primary activity. The proportion of population living in such places was, however, little more than 1/10th only. As against this, 38 UAs/towns having 50,000 and more population thus classified into I and II size-classes accounted for nearly 1/5th of the population of such UAs/towns. More or less same trend has been observed in case of bi-functional and multi-functional categories where 8 out of 254 and 31 out of 362 UAs/towns having bi-functional and multi-functional character accounted for approximately 15% and 25% of the population of such places belonged to size class categories I and II.

As regards the State-level variations in the dispersal of UAs/towns having primary activity as the predominant or leading function, figures presented in Table-9 reveal that in some of the major States, namely, Bihar, Karnataka, Madhya Pradesh, Maharashtra, Orissa and Uttar Pradesh more than 2/3rd of such places had mono-functional character. The proportion population living in these UAs/towns varied from slightly less than 60% in Uttar Pradesh to almost 75% in Bihar. Apart from these, in Tamil Nadu 63% and in West Bengal slightly less than 60% of the population lived in the UAs/towns having mono-functional character. As against these Meghalaya, Mizoram and Lakshadweep among the smaller States and UTs, had entire population of the UAs/towns having primary activity living in the mono-functional places. These were followed by Manipur where approximately 97% of the population lived in 25 out of 26 such places.

The dispersal of bi-functional UAs/towns having primary activities revealed less amount of variations among the major States. For example, number of such places was rather significant in Uttar Pradesh only where 51 places were having bi-functional character and the proportion of population living in such places in all the major States was found to be considerably low, i.e., less than 1/4th except in Haryana and Punjab where, more than 1/3rd of the population of such places lived in bi-functional towns. Further, among the smaller States/UTs, only Tripura returned more than 1/3rd of population living in one of the two primary activity UA/town having bi-functional character. Whereas, in most of the smaller States not a single UA/town was found in this category.

* % of population reported under this column are calculated w.r.t., total urban population.

@ Excluding Jammu & Kashmir where, Census was not held in 1991.

The pattern of distribution of multi-functional UAs/towns revealed somewhat large amount of variations among the States/UTs. To wit, in some of the major States such as Andhra Pradesh, Rajasthan and West Bengal 1/3rd of the urban places having primary activity as the predominant function had multi-functional character. And proportion of population of such places was found to be 1/3rd and more in Andhra Pradesh, Gujarat, Kerala and Rajasthan. Among the smaller States and UTs, in Daman & Diu and Pondicherry the multi-functional UAs/towns accounted for entire population of the UAs/towns having primary activity, these were followed by Goa and Tripura where approximately 74% and 65% of the population lived in 4 out of 6 and 1 of the 2 places respectively.

With a view to throw some light on the exact nature of second and/or third activity in which the proportion of workers among the UAs/towns having primary activity as the leading function, an attempt has been made in the following paragraphs to analyse such activities.

As stated in the beginning of this chapter, almost 2/3rd of the UAs/towns having primary activity were mono-functional in nature. In other words, 40% and more of the work force of such places was engaged in the activities classified under this sector which included agriculture, livestock, forestry, fishing and allied activities and mining and quarrying. Of the remaining, more than 600 UAs/towns, 254 were bi-functional; in character. Distribution of these UAs/towns according to the second dominant activity and by size-class is presented in the following Table-

Table-10: Number and % of Population of Bi-functional@
UAs/Towns having Primary Activity as the Leading
Function and Size-class in India*, 1991

@ Functional types shown against first and second places by the numerals 1 to 5 are 1-Primary Activity; 2-Industry; 3-Trade; 4-Transport; and 5-Services.

As evident from the given figures, a majority of the bi-functional UAs/towns with primary activity as the leading function were having services as the second dominant activity and these places accounted for approximately 46% of the population of such places. Apart from this, only 2 other activities, namely, trade and industry together accounted for more than half of the number and population of the bi-functional UAs/towns. Among the size classes, a large number of bi-functional UAs/towns were found in the size-class - IV followed by size-classes III and V respectively. Thus, the small and medium towns having a population within the range of 5,000 - 50,000 accounted for more than 3/4th of the places and population of the bi-functional primary activity towns in all the 3 categories, i.e., UAs/towns having services, trade and industry as the second leading function. Apart from this, there were only 3 UAs/towns which had transport as the second dominant function and these UAs/towns had less than 20,000 population each.

As regards the State-level variation in the number and percentage of population of the bi-functional UAs/towns having industry/trade/transport/services as the second dominant function, figures presented in Table-11 indicate that half of the 62 UAs/towns having industry as the second dominant function were found in Rajasthan(8), Tamil Nadu(10) and Uttar Pradesh(13) only. Apart from these 3 States, Andhra Pradesh, Gujarat and Kerala, where the number of such places was somewhat large, i.e., 7, 6 and 5 respectively. In case of 87 UAs/towns which had trade as the second dominant activity (including 3 having transport), largest number, i.e., 26 were found in Uttar Pradesh alone followed by Gujarat having 10 places. Besides these 2 States, Punjab had 8 such places followed by Haryana, Madhya Pradesh and Tamil Nadu having 7 each. Thus, these 6 States together accounted for almost 3/4th of such places. Lastly, more than half of the 105 UAs/towns having primary activity as the dominant function which had as services as the second leading function were found in Bihar(23), Madhya Pradesh(21) and Uttar Pradesh(12) followed by Maharashtra and Orissa each having 7 such places. It would further be interesting to note that none of the North-eastern States (excluding Assam and Tripura) as well as UTs had any UA/town falling under this category.

As regards the proportionate distribution of population of bi-functional UAs/towns having primary activity as the leading function in the States/UTs it would be interesting to note that in Manipur entire population of the only town having industry as the second dominant function followed by Kerala (87%) and Andhra Pradesh (65%). In case of UAs/towns having trade as the second dominant activity, this proportion was the maximum in Himachal Pradesh (100%) followed by Punjab (78%) and Haryana (73%). Lastly, in case of UAs/towns having services as the second leading function, the proportion of population living in such places was the maximum (i.e., 100%) in Goa and Tripura followed by Bihar (91%) and Orissa (76%)

Type of second and third dominant activities noted in case of multi-functional UAs/towns having primary activity as the leading function may be visualised from the figures presented in Table-12. It shows that a majority of such places accounting for nearly half of the population had 'trade' as the second leading function. Out of these 110 had 'services' as the third dominant function and these places accounted for 60% of the population of UAs/towns having primary activity and 'trade' as the second and third leading activities respectively. In addition, 119 UAs/towns had 'services' as the second leading function. Out of these, 91 had 'trade' as the third dominant function which accounted for more than 3/4th of the population of the UAs/towns classified under this category. Lastly, out of the remaining 2 categories concentration of multi-functional primary activity's UAs/towns was rather large in the category comprising 68 such places having 'industry' as the second dominant function. Here again, more than half of the places had 'trade' as the third dominant activity. It is thus explicit that almost 90% of the places and 85% of the population of the places having multi-functional character had 'trade' either as the second or third major activity. More or less same type of variations may be noticed from the given Table with respect to the size-class distribution of such places.

State-level variation in the second and third dominant activities among the multi-functional primary activity's UAs/towns may be discerned from the figures presented in Table-13. A glance at this Table indicates that more than half of 68 UAs/towns having 'industry' as the second major activity were from Rajasthan (12), Karnataka(9), Andhra Pradesh and Uttar Pradesh each having 8 such places. A majority of these places in all the States (except Andhra Pradesh, Haryana, Rajasthan and Tamil Nadu) had 'trade' as the third leading function. Further, in case of UAs/towns having 'trade' as the second leading function more than 3/4th were found in Andhra Pradesh, Gujarat, Madhya Pradesh, Maharashtra, Tamil Nadu and Uttar Pradesh, each having 15 or more such places and this number was quite large in Uttar Pradesh (35) followed by Andhra Pradesh (26). In most of the States such places had 'services' as the third leading function. Some significant deviations were, however, noted in the Karnataka, Kerala, Punjab and Rajasthan where, more than half of

* Functional types shown against first, and second places by the numerals 1 to 5 are: 1-Primary Activity; 2-Industry; 3-Trade; 4-Transport; and 5-Services.

@ Excluding Jammu & Kashmir where, Census was not held in 1991.

+ Includes 3 UAs/Towns of category 140

\$ Includes 1 town of category 140.

Includes 2 UAs/Towns of category 140

the UAs/towns falling under this category had 'industry' as the third major activity. Of the 119 urban places which fell in yet another category comprising UAs/towns having 'services' as the second and either 'industry' or 'trade' as the third major activity, a large number were found in Andhra Pradesh, Karnataka, Madhya Pradesh, Maharashtra, Rajasthan and Uttar Pradesh, each having 10 or more such places. These 6 States together accounted for more than 2/3rd of such places. Further, 92 of these UAs/towns had 'trade' as the third dominant activity and their number was considerably large, i.e., 10 and more in Andhra Pradesh, Karnataka, Madhya Pradesh and Uttar Pradesh only. As compared to this, number of multi-functional UAs/towns having 'services' as the second and 'industry' as the third dominant function was less than 5 in all the States except Maharashtra (5) and Rajasthan (6).

As regards the percentage distribution of the population of multi-functional UAs/towns with primary activity as the leading function followed by 'industry', 'trade', 'services', etc., as the second or third major functions in the States/UTs, it may be seen from the given Table that more than half of the population of the UAs/towns falling in this category in Assam, Gujarat, Maharashtra, Punjab, Tamil Nadu and Uttar Pradesh had 'trade' as the second and 'industry' or 'services' as the third leading function. A further break-up of the proportion of population living in such places among these States indicates that in some of the States such as Andhra Pradesh, Assam, Bihar, Haryana, Maharashtra, Tamil Nadu and Uttar Pradesh, the proportion of population living in places having primary activity as the leading function and 'trade' and 'services' as the second and third major functions was comparatively large i.e., more than 1/3rd. Whereas, in none of the States (except Gujarat, Kerala and Punjab), the proportion population living in those places having primary activity as the leading function followed by 'trade' and 'industry' as the second and third activities was up to 1/4th. The proportion of UAs/towns having primary activity as the main function followed by 'services' and 'industry' or 'trade' as the third major activity was the maximum (100%) in Himachal Pradesh and Tripura followed by Goa, Haryana, Madhya Pradesh and Orissa each having more than half of the population living in UAs/towns of this category. Further, even among these states the proportion of population of UAs/towns having 'primary activity' and 'services' as the first two major functions and 'industry' as the third leading activity was relatively large in Goa (31%) and Himachal Pradesh (100%) only. Whereas, the proportion of population living in the UAs/towns having same type of first and second activities but 'trade' as the third major activity was rather large, i.e., more than 1/3rd in Assam, Bihar, Haryana, Madhya Pradesh, Orissa and Tripura.

1 to 5 are: 1-Primary Activity; 2-Industry; 3-Trade; 4-Transport; and 5-Services.

Lastly, among the Union Territories only Daman & Diu and Pondicherry had 3 multi-functional UAs/towns with primary activity as the leading function followed by 'industry' and 'services' as the second or third major function. The proportion of population accounted by these places was 100% in Daman & Diu where only one town falling under this category had primary activity as the leading function and 'services' and 'industry' as the other two major functions. As compared to this, in Pondicherry, one UA having primary activity as the major function followed by 'services' and 'industry' as the other two functions accounted for 3/4th and yet another town having 'industry' and 'services' as the second and third major functions accounted for remaining 1/4th of the population of the multi-functional UAs/towns having primary activity as the leading function.

Section - V

FUNCTIONAL TYPES OF URBAN AGGLOMERATIONS/TOWNS HAVING INDUSTRY AS THE PREDOMINANT/LEADING FUNCTION

Number of industrial UAs/towns, i.e., those urban places having a higher proportion of workers engaged in manufacturing (in households and other than households) and construction activities in India (excluding Jammu & Kashmir) was considerably less than those falling under first category comprising urban places with primary activity as the predominant/leading function. However, as stated earlier, these places accounted for almost half of the urban population in 1991. A further break-up of these places into 'mono', 'bi' and 'multi' functional categories as presented in Table-14, reveals that the number of UAs/towns was comparatively large in the first category comprising 'mono' functional UAs/towns followed by those classified under 'multi' functional category. The proportion of population living in such places, on the other hand was almost equally distributed in 'mono' and 'bi' functional categories each of which accounted for little more than 40% population of the industrial UAs/towns.

Table-14 : Number and % of Population of Mono, Bi and Multi functional, Industrial UAs/towns classified by Size-Class in India*, 1991

* Excluding Jammu & Kashmir where, Census was not held in 1991..

@ % w.r.t. total pop. of the UAs/Towns having Industry.

As regards the size-class distribution of 'mono' 'bi' and 'multi' functional industrial UAs/towns, it may be further seen from the given Table that though the number of such places was considerably less in size-class-I in all the three categories, proportion of population of the industrial UAs/towns reported against 'mono' and 'bi' functional categories was approximately 85% and 94%. This proportion in

the remaining third category of 'multi' functional UAs/towns was slightly less than 2/3rd. Apart from size-class-I, number of UAs/towns in size-classes III and IV (comprising urban places each having a population within the range of 10,000 to 50,000) was considerably large in all the three categories UAs/towns. However, the proportion of population of the industrial UAs/towns classified into 'mono' and 'bi' functional categories in all the remaining five size-classes was less than 5% (except size-class-II in case of 'mono' functional UAs/towns). As compared to this, in 'multi' functional category, size-classes II and III accounted for approximately 16% and 14% of the population whereas, the remaining three size-classes together accounted for less than 5% of the population. It may thus be stated that 4/5th of the population of the industrial UAs/towns was classified into 'mono' and 'bi' functional categories. Further, the concentration of population was very high in the size-class-I in the all the three functional categories and this was most conspicuous in the 'bi' functional category.

Dispersal of mono, bi and multi functional industrial UAs/towns and their population in the States and Union Territories as revealed through the figures presented in Table-15 indicate that more than half of the urban places of Bihar, Haryana, Orissa, Tamil Nadu, Uttar Pradesh and West Bengal among the major states were having industry as the predominant function. In other words, these places were having mono-functional character. The proportion of population living in such places varied from less than 1/10th in Andhra Pradesh and West Bengal to more than 2/3rd in Bihar, Haryana, Maharashtra and Orissa.

As regards the dispersal of 143 bi- functional industrial UAs/towns in the States/Union Territories, it could be seen from the give Table that only in a few States viz. Gujarat, Karnataka, Maharashtra, Rajasthan, Tamil Nadu and Uttar Pradesh number of such places was more than 10 and the maximum 23 was noted in Uttar Pradesh. As compared to the number, the proportion of population living in such places was half or more in the some major States like Andhra Pradesh, Himachal Pradesh, Madhya Pradesh, Punjab, Rajasthan, Tamil Nadu, Uttar Pradesh and West Bengal.

Unlike the preceding category number of industrial UAs/towns classified into third i.e., multi-functional category was more than 20 in a number of States such as Andhra Pradesh(21), Gujarat(29), Karnataka(23), Kerala(23), Madhya Pradesh(24), Maharashtra(25), Rajasthan(28), and Uttar Pradesh(22). But the proportion of population living in multi functional industrial UAs/towns was very low in all the major States except Kerala(86), Andhra Pradesh (approximately 33) and Karnataka and Rajasthan each having slightly more than 26 percent.

* % of population reported under this column are calculated w.r.t., total urban population.

@ Excluding Jammu & Kashmir where Census was not held in 1991.

It may thus be inferred that some major states like Bihar, Haryana, Maharashtra and Orissa had more than 2/3rd of the population of industrial towns classified into 'mono' functional category. Andhra Pradesh, Rajasthan, Tamil Nadu and West Bengal on the other hand, had 60 percent and more population of such places classified into bi- functional category. As compared to these, none of the major states except Kerala showed even 1/3rd of the population of the industrial UAs/towns falling under the multi-functional category.

An analysis of the pattern of distribution of population of bi-functional industrial UAs/towns according to the second leading activity of such places shows a relatively large number of such places having primary activity as the second function followed by those having trade and services respectively. The proportion of population living in such places however, revealed a completely reversed trend as more than half of the population of bi-functional industrial UAs/towns belonged to those which had services as the second leading function followed by those having trade and only a very small population (i.e., less than 5%) was noted in case of those UAs/towns having primary activity as the second leading function. It would further be interesting to note from the figures reported in Table-16 that more than half of the UAs/towns comprising almost entire population of the bi-functional industrial UAs/towns having services as the second leading function was concentrated in size class I followed by nearly 1/3rd of the UAs/towns having trade as the second major function which accounted for more than 90 percent population. As against this, half of the bi-functional industrial UAs/towns having primary activity as the second dominant activity were having a population varying from 10 to 50 thousand and together they accounted for more than 1/3rd of the population whereas another 1/3rd was accounted by 4 U.As/cities each having 1 lakh or more population.

* Excluding Jammu & Kashmir where, Census was not held in 1991.

State-level variation in the pattern of distribution of 'bi' functional industrial UAs/towns having the above mentioned three activities as the second leading function may be discerned from the figures presented in Table-17. It has been revealed from this Table that the number of UAs/towns in all the three functional sub-types was considerably less (i.e., less than 5) except Uttar Pradesh, where number of such places was more than 5 in all the three types. Gujarat and Tamil Nadu in the first two types, followed by Karnataka and Kerala in case of first type, Rajasthan in case of second and Madhya Pradesh as well as Maharashtra in case of third type, having more than 5 UAs/towns.

The percentage distribution of population of the 'bi' functional industrial UAs/towns into three functional types in the major States as evident from the given Table was the maximum in Kerala (86) and Orissa (56) in case of those places where the primary activity was found to be the second leading function. In case of UAs/towns having trade as the second major function, such places accounted for entire population of the 'bi' functional industrial UAs/towns in Bihar. This was followed by West Bengal (99) and Assam (96). Apart from these, in some other major States, viz., Gujarat, Karnataka, Punjab and Tamil Nadu more than 1/4th of the population lived in such places. As compared to these two functional sub-types, in the remaining third sub-type comprising of UAs/towns having 'services' as the second leading function, in Haryana and Himachal Pradesh entire population of UAs/towns of 'bi' functional industrial category lived in such places. These were followed by Andhra Pradesh, Madhya Pradesh and Maharashtra each having more than 9/10th of the population in this sub-type. Apart from these, while in Rajasthan and Uttar Pradesh, this proportion was more than 3/4th in some other States, viz., Gujarat, Karnataka, Orissa, Punjab and Tamil Nadu this was more than 1/3rd.

* Functional types shown against first and second places by the numerals 1 to 5 are: 1-Primary Activity; 2-Industry; 3-Trade; 4-Transport; and 5-Services.

@ Excluding Jammu & Kashmir where, Census was not held in 1991.

A probe into the functional types of the 'multi' functional UAs/towns having 'industry' as the leading function shows that 74 UAs/towns had primary activity as the major function followed by 'trade' or 'transport' or 'industry' as the third major function. Among these 74 UAs/towns, as evident from Table-18, 34 had 'trade' and 38 had 'services' as the third major function. Proportion of population living in UAs/towns of these two sub-types was approximately 9 and 8 respectively. Further, 93 towns had 'trade' as the second major and primary activities or 'services' as the third major function (including one having 'transport' as the major function). More than 40% population of the 'multi' functional industrial UAs/towns was accounted by this functional sub-type. Apart from these, out of 74 UAs/towns having 'services' as the second leading function, 56 had 'trade' as the third leading function followed by 17 having primary activity as the third function. More than 1/3rd of the population of the 'multi' functional UAs/towns was accounted by those having 'trade' as the third major activity. It is thus explicit that 3/4th of the 'multi' functional industrial UAs/towns had 'trade' either as the second or third major activity and these together accounted for more than 85% of the population of such places.

A size-class break-up of the population classified into the aforesaid functional sub-type as presented in the given Table shows that only 46 'multi' functional industrial UAs/towns were classified into size-class-I. These accounted for more than 60% of the population of all such UAs/towns. Further, more than 2/3rd of the population of UAs/towns falling under two functional types viz., those having trade and services as the second major activity followed by remaining others as the third major activity was classified into size-class-I. As against this, in the remaining two functional types comprising 5 UAs/towns having either primary activity as the second or those having 'transport' as the second major activity followed by 'trade' or 'transport' or 'services' as the third major activity, this proportion was considerably low i.e., approximately 47 and 41 p.c., only. Further, variation in the number and population of such places into different size-classes may be noted from the figures presented in the given Table.

State-level variation in the number and percentage of population classified into each functional sub-type may be viewed from the figures reported in Table-19. An analysis of the pattern of distribution of number and population of the UAs/towns into different functional sub-types as attempted from the given Table indicates that in a number of major States more than half of the urban places falling into 'multi' functional industrial category were having trade and services either as the second or the third major activity and these accounted for more than 2/3rd of the population of such places. Outstanding among these was Karnataka where 15 out of 23, UAs/towns accounting for 90% of the population were classified into these two sub-types. Apart from these, in some of the major States such as Bihar, Orissa and West Bengal, number and proportion of population classified into first two functional sub-types having primary activity as the second and trade or services as the third major activity was quite

@ Functional types shown against first, second and third places by the numerals 1 to 5 are 1-Primary Activity; 2-Industry; 3-Trade; 4-Transport; and 5-Services.

substantial. For example, in Bihar 1 of the 2 'multi' functional industrial UAs/towns had primary activity and services as the second and third major functions and this accounted for 90% of the population. A similar trend was noticed in Assam and Punjab in case of 2 and 1 'multi' functional industrial UAs/towns having trade and primary activity as the second and third major activity accounted for the entire population in Punjab and little less than 2/3rd population of the UAs/towns of Assam. It may thus be inferred that a majority of the 'multi' functional industrial UAs/towns either had trade and services as the second and/or third major activity followed by those having primary activity and these accounted for more than 3/4th of population of such places of the major States.

d. Includes 1 Town of 254 (1 of Assam).

Section-VI

FUNCTIONAL TYPES OF URBAN AGGLOMERATIONS/TOWNS HAVING TRADE AS THE PREDOMINANT/LEADING FUNCTION

As stated earlier in Section-II, 460 UAs/towns accounting for nearly 7% of urban population had 'trade' as the predominant/leading activity. A break-up of such places and percentage of population into 'mono', 'bi' and 'multi' functional categories reveals that more than half of such places accounting for approximately 69% of the population had 'multi' functional character followed by 1/4th of such places and population falling into 'bi' functional category. Thus, only 62 places accounting for only 5% of the population were classified into 'mono' functional category.

Table-20 : Number and % of Population of UAs/Towns having Trade as the Predominant Activity classified by Mono, Bi and Multi-functional character and Size Class in India*, 1991.

Size Class	Mono-functional		Bi-functional		Multi-functional	
	No.	%Pop.	No.	%Pop.	No.	%Pop.

@ % w.r.t total pop., of the 460 Trading UAs/Towns.

As regards the size-class break-up of the number and percentage of population of the UAs/towns falling into these three functional categories, it may further be seen from the given Table while the number of 'mono' and 'bi' functional trading UAs/towns was the maximum in size-class-IV, number of such places in case of 'multi' functional towns was found to be the maximum in case of size-class-III. The proportion of population living in the 'mono' functional places, on the other hand, was the maximum in size-class-IV (43%) followed by size-class-III (approximately 28%). In case of 'bi' functional

UAs/towns the first two size-class categories accounted for more than 60% population followed by another 1/3rd classified into the next two categories. As against this, the proportion of population of the 'multi' functional trading UAs/town was more or less equally distributed into first three categories which together accounted for more than 4/5th of the population.

Distribution of number and population of trading UAs/towns into 'mono', 'bi' and 'multi' functional categories among the States and Union Territories may be viewed from the figures presented in Table-21. It shows that except Assam and Uttar Pradesh, all other major States had less than 10 such places classified into 'mono' functional type. The proportion of population in this category was found to be significant only in Assam and Bihar which returned 10% or more population living in the UAs/towns classified into this category. In case of 'bi' functional trading towns, Assam, Bihar, Haryana, Punjab and Uttar Pradesh had 10 or more such places and this number was the maximum (41) in Uttar Pradesh. The proportion of population living in such UAs/towns in the major states was 50% and more in Bihar and Haryana followed by Assam, Punjab, Tamil Nadu and Uttar Pradesh where, it varied between 25% to 50%. Lastly, in case of 'multi' functional trading towns, a number of States returned more than 10 such places and the maximum was found in Uttar Pradesh (60) followed by Rajasthan (26) and Punjab and West Bengal (23 each). The proportion of population living in such places, on the other hand, was more than 90% in Andhra Pradesh, Gujarat, Kerala, Madhya Pradesh and Maharashtra. Apart from these, in some other major States like Karnataka, Orissa, Rajasthan and West Bengal more than 3/4th population of trading UAs/towns was classified under this category. It is thus apparent that number as well as proportion of population of the trading UAs/towns classified into 'multi' functional category was quite significant in a number of major States. In case of smaller States and Union Territories only Goa, Manipur, Sikkim and Daman & Diu had one or more trading UAs/towns. Out of these in Manipur, there was only one such place which had 'mono' functional character, whereas in Daman & Diu only one trading town had 'multi' functional character. As against these in Sikkim 4 and 3 places, each accounting for half of the population of trading UAs/towns were classified into 'mono' and 'bi' categories and in Goa, 1 and 3 places having 'bi' and 'multi' functional character accounted for 57 and 43 p.c. of population.

An analysis of the nature of second major activity in case of bi-functional trading UAs/towns shows that more than half of such places comprising almost 70% of the population had 'services' as the second leading function followed by remaining 52 places which were more or less equally distributed in the first and second sub-functional types having 'primary activity' and 'industry' as the second leading function. The proportion of population classified under these two sub-types, as evident from

* Excluding Jammu & Kashmir where, Census was not held in 1991.

@ Functional types shown against first and second places by the numerals 1 to 5 are 1-Primary Activity; 2-Industry; 3-Trade; 4-Transport; and 5-Services.

The size-class break up of the UAs/towns falling under these three categories as may be seen from the figures presented in the given Table, indicates that most of the places having 'trade' and 'primary activity' as the first two leading functions were small towns with a population size varying from 5 to 20 thousand. As compared to this, places having either 'industry' or 'services' as the second leading function were mostly from the size-classes II to IV which accounted for 23 out of 27 and 51 out of 74 such places respectively. About the proportionate distribution of population of such places, it may further be seen that nearly half of the population of the bi-functional UAs/Towns with 'primary activity' as the second leading function was found in size-class IV. Similarly, size-class II accounted for more than 40 per cent of population of such places having 'industry' as the second leading function. As against these, size-classes I to II together accounted for 70 per cent of the population in case of those having 'services' as the second major activity. It may thus be highlighted from the foregoing analysis that most of the UAs/towns and the proportion of population living therein having 'trade' and 'primary activity' as the first and second leading functions were found in size-class III-IV. Whereas, number of UAs/Towns having 'trade' as the first and 'industry' or

'services' as the second leading functions were largely found in size-classes II to IV. The proportion of population living in such places was quite large (70 per cent) in the first two size-classes in case of those having 'services' as the second leading function and in size-classes II and III in case of places having 'industry' as the second leading function.

The pattern of distribution of the bi-functional trading UAs/Towns in the States and Union Territories may be visualised from the figures presented in Table-23. It indicates that more than half of such places having 'primary activity' as the second leading function were from Uttar Pradesh (12) followed by Bihar (6). Similarly, those having 'industry' as the second leading function were from Uttar Pradesh (7), Punjab (4) and Assam (3) and those having 'services' were located in Uttar Pradesh (22) and Haryana (10) followed by Assam (9) and Punjab (8).

The proportion of population of the trading bi-functional UAs/Towns in the States/Union Territories as given in the Table indicates that in Kerala and Orissa, entire population of such UAs/Towns was living in one UA/Town having 'primary activity' as the second leading function. A similar situation was obtained in Goa, Gujarat and Madhya Pradesh in case of UAs/Towns having 'industry' as the second leading function and in case of 3 UAs/Towns of West Bengal which had 'services' as the leading function. Apart from these States, the proportion of population in UAs/Towns having 'primary activity' was rather significant only in Bihar which returned 1/5th of the population living in such places. As compared to these, more than half of the population of Maharashtra, Punjab and Sikkim was living in bi-functional trading UAs/Towns having 'industry' as the second leading function. More or less a similar situation was observed in Assam, Bihar, Haryana, Himachal Pradesh, Rajasthan, Tamil Nadu and Uttar Pradesh in case of those bi-functional trading UAs/Towns which had 'services' as the second leading function.

The pattern of size-class distribution of multi-functional 'trading' UAs/towns by functional sub-types i.e., according to nature of second and third major functions may be visualised from the figures presented in Table-24. It shows that half of the multi-functional trading UAs/towns accounting for nearly 2/3rd of the population of such places were having either 'industry' and 'services' or 'services' and 'industry' as the second and third dominant functions. As against this, all the remaining UAs/towns (except 5 UAs/towns having transport as the second or third major activity) accounting for the remaining 1/3rd of the population of the trading UAs/towns were classified under the sub-types having 'primary activity', 'industry' and 'services' as the second or third dominant functions.

* Functional types shown against first and second places by the numerals 1 to 5 are: 1-Primary Activity; 2-Industry; 3-Trade; 4-Transport; and 5-Services.

@ Excluding Jammu & Kashmir where, Census was not held in 1991.

As regards the size-class break-up of such places it may be seen from the given Table that these UAs/towns were medium and small UAs/towns with only some exceptions noted in case of those having 'industry' as the second or third dominant function which were found in sizeable number in size-classes I and II. Similarly, the proportion of population in case of UAs/towns having 'primary activity' as the second or third major activity was found to be large in size-classes III and IV. As against this, the population of the places having 'industry' as the second or third dominant activity largely confined to size-classes I and II. Lastly, the proportion of population living in places having 'services' as the second or third major activity was almost evenly distributed in the second and third size classes which together accounted for 60 per cent of the population followed by size-class V accounting another 1/4th.

Distribution of multi-functional trading UAs/towns among the States and Union Territories as evident from the figures presented in Table-25 reveals that in all the functional types number of such places was less than 10 in all the States/Union Territories except Uttar Pradesh which returned more than 10 such places in first two types comprising UAs/towns with 'primary activity' as the second and 'industry' and 'services' as the third major function on the one hand and the last two comprising UAs/towns having 'services' as the second major function followed by 'primary activity' and 'services' as the third major function on the other. Apart from Uttar Pradesh, in some other States such as Gujarat, Madhya Pradesh, Punjab, Rajasthan and West Bengal, total number of UAs/towns classified into first two types and Andhra Pradesh, Assam, Haryana, Karnataka, Madhya Pradesh, Maharashtra, Punjab, Rajasthan, Tamil Nadu and West Bengal in case of last two functional types was 5 or more. Besides these, in two of the remaining types comprising UAs/towns having 'industry' as the second major function followed by 'primary activity' or 'services' as the third function 5 or more UAs/towns were found. In Daman and Diu amongst the Union Territories, only as the second and third leading functions.

The percentage distribution of population of the trading multi-functional UAs/towns according to functional types as may be seen from the figures presented in the given Table was somewhat significant i.e., 1/3rd in Bihar only in the functional types comprising UAs/towns with 'primary activity' as the second and 'industry' or 'services' as the third major activity. This was followed by Assam, Rajasthan and Uttar Pradesh which had more than 1/4th of the population of the multi-functional UAs/towns classified into this type. In case of trading UAs/towns having 'industry' as the second and 'primary activity' or 'services' as the third major activity, the proportion of population was found to be very high i.e., more than 60 per cent in Andhra Pradesh, Goa and Haryana. These were followed by Gujarat, Madhya Pradesh,

SECTION VII

FUNCTIONAL TYPES OF URBAN AGGLOMERATIONS/TOWNS HAVING TRANSPORT AS THE PREDOMINANT/LEADING FUNCTION

Table 26 provides the distribution of 22 transport UAs/towns according to mono, bi and multi-functional character and size-class categories in India. It reveals that mono and multi-functional categories comprised 10 such places each. The proportion of population was however very large i.e., more than 2/3rd in the 'multi-functional' category whereas, less than 1/4th was accounted by 'mono-functional' category. As against this 'bi-functional' category accounted by the remaining 2 UAs/towns comprising less than 10% population.

Table-26 : Number and % of Population of UAs/Towns having Transport as the Predominant Activity classified by Mono, Bi and Multi-functional character and Size Class in India*, 1991

* Excluding Jammu & Kashmir where, Census was not held in 1991.

@ P.C. w.r.t., total pop., of the UAs/Towns having Transport as the predominant/leading function.

The size-class break-up of such classes indicated that 48% of the population of the 'multi-functional' UAs/towns was accounted by 1 UA only having more than 100,000 population followed by 2 and 3 such places classified into next 2 categories which accounted for more than 40% of the population. As against this, 2 UAs/towns belonging to size-class III accounted for more than 1/3rd of the population of 'mono-functional' UAs/towns followed by 1 class II U.A. comprising more than 1/4th of the population whereas remaining (i.e., less than 40%) was accounted by 7 UAs/towns classified into IV and V size-classes.

Lastly, 2 UAs falling in size-classes III and IV accounted for 3/4th and 1/4th of the population of the 'bi-functional' category.

As regards the dispersal of these transport UAs/towns according to functional sub-types and States/Union Territories, it may be seen from Table-27 that some of the States such as Assam, Bihar, Gujarat and Uttar Pradesh had 3 UAs/towns each. These were followed by Andhra Pradesh, Maharashtra, Orissa and West Bengal each having 2 places and Madhya Pradesh and Lakshadweep having 1 transport town each.

A further probe into the extent of functional diversification of these transport UAs/towns shows that in Bihar all the 3 towns had 'mono-functional' character followed by Gujarat where, 2 of the 3 such places were falling under this category. Apart from these, in Andhra Pradesh, Orissa and West Bengal, one town each had 'mono-functional' character. As against these, both the 'bi-functional' UAs/towns were from Assam only. Lastly, both the UAs/towns of Maharashtra and 2 of the 3 such places of Uttar Pradesh had 'multi-functional' character. These were followed by Andhra Pradesh, Orissa and West Bengal each of which had 1 UA/town each having 'multi-functional' character. Out of the remaining, 1 transport town of Madhya Pradesh and another of Lakshadweep had 'multi-functional' character.

About the exact nature of 'bi-functional' and 'multi-functional' transport UAs/towns, it may be seen from the particulars given in Table-28 that 1 of the 2 bi-functional UAs of Assam had 'trade' and another had 'services' as the second major function. Further, 2 of the 10 multi-functional transport towns (one of Andhra Pradesh another of Maharashtra) had 'industry' and 'services' as the second the third dominant functions. These were followed by 2 UAs/towns of Uttar Pradesh which had 'trade' and 'services' as the second and the third dominant functions. All the remaining 6 transport UAs/towns had 'services' as the leading function. Trade was the third major function of 3 such places and these were situated in Maharashtra, Orissa and West Bengal. Further, 2 (1 from Madhya Pradesh and 1 from Lakshadweep) had 'industry' as the third major function and the remaining one of Gujarat had 'primary activity' as the third major function.

Section - VIII

FUNCTIONAL TYPES OF URBAN AGGLOMERATIONS/TOWNS HAVING 'SERVICES' AS THE PREDOMINANT/LEADING FUNCTION

There were 736 UAs/towns in India with 'services' as the predominant or the leading function which together accounted for more than 1/4th of the urban population. Distribution of these places and their population into 'mono', 'bi' and 'multi' functional categories by size-classes as presented in Table-29 shows that a majority of such places had 'multi' functional character which accounted for little more than 1/3rd of the population of such places. These were followed by 250 and 180 'mono' and 'bi' functional UAs/towns accounting for more than 1/5th and 2/5th of the population of such places. In other words the 'bi' functional UAs/towns comprised a relatively large proportion of population in spite of the fact that the number of such places falling into this category was considerably less than the remaining two categories.

Table-29 : Number and % of Population of UAs/Towns having Services as the Predominant Activity classified by Mono, Bi and Multi-functional character and Size Class in India*, 1991.

Sl. No.	Size Class	Mono-functional		Bi-functional		Multi-functional

* Excluding Jammu & Kashmir where, Census was not held in 1991..

@ P.C. w.r.t., total pop., of the UAs/Towns having 'Services' as the predominant/leading function.

Size-class break-up of these places as revealed through the figures given in the above Table shows that more than 60% population of the 'mono' functional UAs/towns was living in 23 UAs/towns of size-class-I. These were followed by another 1/4th living in size-classes II and III. Thus only 1/10th of the population was accounted by more than half of the UAs/towns of

the remaining 3 size-class categories. More or less same pattern of distribution of UAs/towns as well as their population in case of 'bi' functional and 'multi' functional categories was observed. To wit, more than 80% population of the 'bi' functional UAs/towns and little less than 60% of the 'multi' functional UAs/towns were accounted by 41 and 56 UAs/cities of size-class-I. Further, while 13% of the remaining population of 'bi' functional UAs/towns was classified into size-classes II and III, in case of 'multi' functional UAs/towns this proportion was more than 1/3rd.

Considering the pattern of distribution of UAs/towns of the States and Union Territories into 'mono', 'bi' and 'multi' functional categories, it may be seen from the figures presented in Table-30 that Uttar Pradesh had the maximum number (53 and 24) of 'mono' and 'bi' functional UAs/towns whereas, the number of 'multi' functional UAs/towns was found to be the maximum (51) in Madhya Pradesh. Apart from Uttar Pradesh, Bihar and Himachal Pradesh had more than 20 'mono' functional UAs/towns. These were followed by Andhra Pradesh, Karnataka, Madhya Pradesh, Maharashtra, Punjab and Tripura each having more than 10 such places. As compared to these, number of 'bi' functional UAs/towns varied from 10 to 16 in Assam, Bihar, Gujarat, Himachal Pradesh, Madhya Pradesh, Maharashtra, Orissa, Punjab and Rajasthan. In case of 'multi' functional category besides Madhya Pradesh, Maharashtra and Uttar Pradesh had comparatively large number of such places i.e., 36 and 37. These were followed by Rajasthan (21) and West Bengal (24). Lastly, the distribution of 13 UAs/towns of the Union Territories having 'services' as the predominant/leading function shows that Andaman & Nicobar Islands, Chandigarh and Lakshadweep had 1 'mono' functional UA/town each whereas, 4 'bi' functional UAs/towns were from Delhi, 2 from Pondicherry and 1 from Lakshadweep. As against this, 1 'multi' functional town was from Delhi and 2 were from Pondicherry.

As regards the percentage distribution of population of UAs/towns having 'services' as the predominant function in the major States, it may be revealed from the figures reported in the given Table that more than half of the population of Bihar and Himachal Pradesh was classified into 'mono' functional UAs/towns having 'services' as the predominant function. These were followed by Haryana, Karnataka, Orissa and Uttar Pradesh each having 1/4th or more population in this category. As against this, the proportion of such UAs/towns falling under 'bi' functional category was the maximum in Assam (more than 4/5th) followed by Andhra Pradesh, Haryana, Madhya Pradesh, Orissa, Punjab and Rajasthan each having more than 1/3rd population of the services UAs/towns classified into 'bi' functional category. The population of service UAs/towns in the 'multi' functional category was the maximum in Maharashtra (approx. 4/5th) followed by West Bengal having about 2/3rd population in this category. Apart from these, in Andhra Pradesh, Gujarat, Karnataka, Madhya Pradesh and Tamil Nadu this proportion varied in between half and

two-thirds. Lastly, most of the 'service' UAs/towns of the smaller States and Union Territories, had 'mono' functional character.

A perusal of figures presented in Table 31 pertaining to the distribution of 'bi-functional' UAs/towns having 'services' as the leading function according to the nature of second leading function shows that more than 2/3rd of the population of such places was living in 37 UAs/towns which had 'industry' as the second function. These were followed by another 29% living in 100 UAs/towns which had 'services' and 'trade and commerce' as the first and second leading function. Thus, less than 5% of the population was accounted by the UAs/towns falling under remaining two categories having primary activity or services as the second leading function.

* Excluding Jammu & Kashmir where, Census was not held in 1991.

@ Functional types shown against first and second places by the numerals 1 to 5 are 1-Primary Activity; 2-Industry; 3-Trade; 4-Transport; and 5-Services.

As regards the size-class break-up of the places and population classified into the four functional types, it is evident from the given Table that 30 UAs/towns having 'services' and 'primary activity' as the two major functions were having less than 20 thousand population and thus classified into last remaining 3 size-classes followed by 7 having population within the range of 20 to 50 thousand population. As against this,

almost half of the UAs/towns having 'services' and 'industry' or 'trade' as the first and second major function were classified into size-classes 1 and II and remaining 2 places having 'services' and 'transport' as the first and second major function were falling under size-classes II and V.

The percentage distribution of population of the UAs/towns of these types into size-classes indicates that more than 95% of the population of the UAs/towns having 'industry' as the second major function was classified into the first size-class category alone. Further, the proportion of the population of the UAs/towns having 'trade' as the second major function was more than 60% in the size class I followed by more than 20% falling into size-class II. As against this, little more than 1/3rd of the population of the UAs/towns having 'primary activity' as the second major function was classified into size-class I followed by more than 1/5th in size-classes III and IV each. Lastly, more than 90 per cent of the population of the UAs/towns having 'transport' as the second leading function was accounted by 1 UA of size-class II.

Distribution of 'bi' functional UAs/towns with 'services' as the predominant function in the States and Union Territories reveals that except Assam and Uttar Pradesh, number of such places was less than 10 in all the three sub-types. Further, more than half of the UAs/towns having 'primary activity' as the second leading function were from Madhya Pradesh (7), Orissa and Uttar Pradesh having 5 UAs/towns each and Himachal Pradesh and Maharashtra each having 4 such places. Similarly, almost half of the UAs/towns having 'industry' as the second leading function were from Rajasthan (6), Himachal Pradesh, Maharashtra and Uttar Pradesh each having 4 such places. As against these, besides Assam (12) and Uttar Pradesh (15), number of UAs/towns having 'services' as the second major function was comparatively large in Orissa and Punjab each having 9 and Bihar having 8 such places (Table 32).

The percentage of population living in these 'bi' functional UAs/towns in all the major States was comparatively low in the first type comprising UAs/towns having primary activity as the second major function except West Bengal having more than 1/5th of the population in this type. As compared to this, in some of the major States, more than 2/3rd of the population of UAs/towns had 'industry' as the second major function. Notable among these were Rajasthan (approximately 94%) and Madhya Pradesh having more than 4/5th of the population classified under this type. In case of UAs/towns having 'trade' as the second major function, Assam, Karnataka, Orissa, Punjab and Tamil Nadu among the major States returned 9/10th or more population in this type. Besides these, in Bihar, Haryana and West Bengal, this proportion was more than 3/4th. Lastly, the number and population of the 'bi' functional UAs/towns falling under these types varied widely among the smaller States and Union Territories. For example, while both

* Functional types shown against first and second places
by the numerals 1 to 5 are: 1-Primary Activity; 2-industry;
3-Trade; 4-Transport; and 5-Services.

@ Excluding Jammu & Kashmir where, Census was not held in 1991.

a-Includes 2 UAs/Towns of Bihar falling under category 540.

the UAs/towns of Meghalaya had primary activity as the second leading function, 3 of Delhi and 1 each from Lakshadweep and Pondicherry accounting for almost population had 'industry' as the second major function. As against these, only 1 'bi' functional town of Nagaland had trade as the second leading function.

A probe into the nature of second and third major function in case of 'multi' functional UAs/towns having 'services' as the leading function, as attempted from the figures presented in Table-33, indicates that 2/3rd of the population lived in nearly half (i.e., 149) 'multi' functional UAs/towns which had 'trade' and 'industry' or 'industry' and 'trade' as the second and third major functions. Another 1/5th lived in more than 100 'multi' functional UAs/towns having 'primary activity' and 'trade' or 'trade' and 'primary activity' as the second and third major functions.

A size-class break-up of the number and population of these 'multi' functional UAs/towns as presented in the given Table shows that 45 cities/UAs accounted for more than 2/3rd of the population of type with 'industry' and 'trade' as the second or third leading functions. Whereas, in case of those having 'primary activity' and 'trade' as the second and third major functions, about half of the population was accounted by 2 UAs/towns of size-class-I. Apart from this, though the number of UAs/towns in Size-classes I and III was comparatively less, the proportion of population living in such places was rather significant in the remaining types with some minor exceptions as noted in one or two size-class categories.

Patterns of dispersal of Multi-functional UAs/towns in to the above mentioned types in the States and Union Territories may be discerned from Table-34. It shows that half of these places having 'primary activity' as the second and 'industry' or 'trade' as the third major functions were from Maharashtra (11), Rajasthan (7), Bihar, Kerala, Madhya Pradesh and Uttar Pradesh each having 6 such places. Similarly, half of the UAs/towns having 'industry' as the second and 'Primary Activity' or 'trade' as the third leading functions were from Madhya Pradesh (15), Maharashtra (14) and Rajasthan (7). As against these, the number of UAs/towns having 'trade' as the second and 'primary activity' or 'industry' as the third major functions was the maximum in Madhya Pradesh (29) followed by Uttar Pradesh (26) and West Bengal (15). Apart from these, Andhra Pradesh, Gujarat and Maharashtra had 10 and more such places each. Lastly, out of 6 UAs/towns having transport as the second major function 1 UA/town each from Bihar, Goa, Tamil Nadu and West Bengal had 'industry' as the third major function followed by 1 UA/town each from Gujarat and Uttar Pradesh having 'primary activity' and 'trade' as the third leading function respectively.

@ Functional types shown against first, second and third places by the numerals 1,2&3 are-

1-Primary Activity; 2-Industry; 3-Trade; 4-Transport; and 5-Services.

As regards the proportionate distribution of population of such places, it may further be seen from the given Table that in Kerala, among the major States, almost entire population was classified in to first two sub types having 'primary activity' as the second and 'industry' or 'trade' as the third major functions. Apart from this only in Bihar and Himachal Pradesh the proportion of population classified into this type was rather significant i.e., 44 and approximately 20 percent respectively. The proportion of population of the multi-functional UAs/towns in the next two types having 'industry' as the second and 'primary activity' or 'trade' as the third major functions was the maximum in Himachal Pradesh (4/5th) followed by Maharashtra (63%) and Rajasthan (66%). Apart from these, only a few other major states viz., Andhra Pradesh, Haryana, Madhya Pradesh, Orissa, Tamil Nadu and Uttar Pradesh had about 1/3rd of the population of multi- functional service UAs/towns falling under these subtypes. In the next two functional types having 'trade' the second and 'primary activity' or 'industry' as the third major functions, the proportion of population was found to be more than 9/10th in Assam and Punjab followed by Gujarat, Karnataka and West Bengal each having more than 4/5th population classified under these sub-types. Apart from these, in a few other major states viz., Andhra Pradesh, Haryana, Madhya Pradesh and Uttar Pradesh, this proportion was more than half. Further variation in the pattern of population distribution in the remaining functional sub-types and also in case of smaller states and Union Territories may be viewed from the given Table.

a-Includes 1 UA/Town each from Haryana, Maharashtra, Uttar Pradesh & West Bengal of category 524.

b-Includes 1 UA/Town each from Gujarat, Madhya Pradesh, and Rajasthan falling under category 534.

c-Includes 1 UA/Town each from Gujarat & Uttar Pradesh belonging to category 541 and 543 respectively.

Section - IX

URBAN AGGLOMERATIONS/TOWNS CLASSIFIED UNDER DIFFERENT FUNCTIONAL SUB-TYPES

After having analysed the distribution of UAs/towns into five broad functional categories, an attempt is made in this Section to provide an account of those UAs/towns which have been though classified into different functional categories had a sizeable proportion (at least 1/4th) of workers engaged in one of the following activities:

- Forestry/fishing (including livestock, hunting, plantation, orchard, etc.)
- Mining and Quarrying
- Artisan, (i.e., manufacturing in household industry)
- Construction

This analysis is being presented with a view to provide some idea about the distribution of urban places which could be categorised under forestry/fishing, mining, artisan or construction sub-types.

I. UAs/towns classified under Forestry/Fishing sub-type:

Figures presented in Table-35 reveal that 38 UAs/towns had forestry/fishing as the first or second major function. It is evident from the given Table that while number of such UAs/towns was quite large in size classes IV and V, the proportion of population of such places was the maximum (30%) in size class-III. As against this one town (Valparai of Tamil Nadu) had more than 1 lakh population and 2 towns (Ponnani of Kerala and Devarhola of Tamil Nadu) had more than 50,000 Persons each. These 3 towns together accounted for almost 1/3rd of the population of such places.

Table-35: Size-Class Distribution of UAs/Towns of India*
classified under Forestry/Fishing@ sub-type

Sl.No.	Size Class	No.	Pop.	%Pop.
I	100,000 and above	1	106523	16.31
II	50,000-99,999	2	109319	16.74
III	20,000-49,999	7	198464	30.39
IV	10,000-19,999	11	153266	23.47
V	5,000-9,999	9	59898	9.17
VI	Below 5,000	8	25554	3.91
	Total	38	653024	100.00

* Excluding Jammu & Kashmir where, Census was not held in 1991.

@ Other industrial activities included under this category are (i) Livestock (ii) Hunting and Plantations (iii) Orchards and allied activities.

As regards the distribution of these places in the States/UTs, it may be seen from Table-36 that Tamil Nadu amongst all the 11 States and 3 Uts (having forestry/fishing UAs/towns), had the maximum (10) UAs/towns and these accounted for more than half of the population of such places of India. This was followed by Kerala, where, 17% population of such places lived in 3 towns only.

Table-36: Number and Population of UAs/Towns classified under Forestry/Fishing* by States@

Sl.No.	State	No.	Pop.	%Pop.
INDIA\$		38	653024	100.00
1	Andhra Pradesh	1	1005	0.15
2	Gujarat	2	22444	3.44
3	Karnataka	8	43665	6.69
4	Kerala	3	111736	17.11
5	Madhya Pradesh	4	35058	5.37

11	West Bengal	2	14832	2.27
12	Daman & Diu (UT)	1	20638	3.16
13	Lakshadweep (UT)	1	5670	0.87
14	Pondicherry (UT)	1	10446	1.60

* Other industrial activities included under this category are- (i) Livestock (ii) Hunting and Plantations, and (iii) Orchards and allied activities.

@ Excluding those States/Uts, where no UA/Towns had atleast 1/4th of Workers engaged in Forestry, & Fishing.

\$ Excluding Jammu & Kashmir where, Census was not held in 1991.

Extent of variation in the percentage of workers engaged in forestry/fishing activities of these 38 UAs/towns as attempted from Table-37 indicates that in 3 Towns, this proportion was 3/4th or more and the maximum (9/10th) was in Krishnapura of Karnataka which, however, had a meagre population (i.e., 1,562 only). Apart from these, 2 towns (Valparai of Tamil Nadu and Borkhera of Rajasthan) had more than 2/3rd workers engaged in such activities. Lastly, in 2 UAs of Tamil Nadu (Kotagiri and Naduvattam) out of the remaining 35 such places more than 60% workers were engaged in this activity followed by 1 town of Karnataka (Almatti-Sitamani), having half of its workers were found in forestry/fishing or allied activities.

Other industrial activities included under this category are- (i) Livestock

(ii) Hunting and Plantations (iii) Orchards and allied activities.

@ Functional types denoted by 1 to 5 are 1-Primary Activity; 2-Industry;

3-Trade; 4-Transport; and 5-Services. Further the numerals appearing at the

first, second, and third places refer to the respective function in descending order.

* Refers to New Town of 1981 Census.

** Refers to New Town of 1991 Census.

II. UAs/towns classified under Mining and Quarrying sub-type

In 96 UAs/towns, atleast 1/4th of their workers were engaged in these activities. Table-38 provides size-class distribution of such places. It shows that 9 such places had more than 1 lakh population each. These are -

- | | | |
|-------------------|---|-----------------------------|
| 1. Andhra Pradesh | : | Ramagundam and Kothagundam |
| 2. Bihar | : | Patratu, Dhanbad and Phusro |
| 3. Karnataka | : | Kolar Gold Field |
| 4. Tamil Nadu | : | Neyveli |
| 5. West Bengal | : | Ondal and Raniganj |

Almost half of the population lived in these 9 places. Apart from these, 8 UAs/towns of size class - II and 12 of size class - III accounted for approximately 16% and 11% of the population respectively. Thus 4/5th population of mining and quarrying UAs/towns lived in 29 UAs/towns of the first 3 size class category. As against this, 10 towns of size-class VI accounted for merely 1% of the population of such places.

Table - 38: Size-Class Distribution of UAs/Towns of India*
classified under Mining & Quarrying Sub-type

Sl.No.	Size Class	No.	Pop.	% Pop.
I	100,000 and above	9	2035061	54.99
II	50,000-99,999	8	591790	15.99
III	20,000-49,999	12	402151	10.87
IV	10,000-19,999	29	413364	11.17
V	5,000-9,999	28	216183	5.84
VI	Below 5,000	10	42216	1.14
	Total	96	3700765	100.00

* Excluding Jammu & Kashmir where, Census was not held in 1991.

All these 96 mining and quarrying UAs/towns, as may be seen from Table - 39, were distributed in 12 States out of which 1/3rd were from Madhya Pradesh alone which, however, comprised little less than 1/5th of the population. This was followed by Bihar having 16 such places accounting for more than 1/3rd of the

population. Apart from these 2 States, 7 UAs/towns each from Andhra Pradesh and West Bengal accounted for approximately 15 and 12 p.c., population of the mining and quarrying UAs/towns of India.

Table-39: Number and Population of UAs/Towns classified under Mining & Quarrying by States*

Sl.No.	State/UT	No.	Pop.	% Pop.
	INDIA@	96	3700765	100.00
1.	Andhra Pradesh	7	552354	14.93
2.	Assam	1	17017	0.46
3.	Bihar	16	1314888	35.53
4.	Goa	1	6457	0.17
5.	Gujarat	2	20308	0.55
6.	Karnataka	6	199840	5.40
7.	Madhya Pradesh	32	704477	19.04
8.	Maharashtra	10	95824	2.59

10.	Rajasthan	6	87581	2.37
11.	Tamil Nadu	1	126889	3.43
12.	West Bengal	7	428430	11.58

* Excludes those States, where no UA/Town had atleast 1/4th of workers engaged in Mining & Quarrying activities.

@ Excluding Jammu & Kashmir where, Census was not held in 1991.

As regards the variation in the percentage of workers engaged in mining and quarrying activities in these 96 UAs/towns, it may be seen from Table - 40 that more than half of these places had at least 50% of the workers engaged in this activity. 8 UAs/towns amongst these had more than 3/4th workers engaged in this activity and the maximum (85%) was noted for Hati Gold Mines of Karnataka followed by Dungarpur of Gujarat and Satalkheri of Rajasthan having more than 80% of their workers engaged in this activity. It may, however, be noted from the given Table that, all these 8 places were having population less than 20,000 each, thus falling under small towns category.

** Refers to New Town of 1991 Census.

III. UAs/towns classified under Artisan sub-type:

As stated earlier all places having 1/4th or more workers engaged in household industry were treated under artisan functional sub-type. Table - 41 provides a size-class break-up of 96 UAs/towns falling under this category. It shows that 3 UAs/towns among these were having more than 1 lakh population each. These are Cherthala (Kerala), Maunath Bhanjan (U.P.) and Santipur (West Bengal). These 3 places accounted for more than 15% of the places of such UAs/towns to be followed by 9 and 19 places classified into next two size-classes accounting for 27 and 24 percent population respectively. In size-class IV out of the remaining three categories, there were 34 such places which accounted for little more than 1/5th of the population.

Table- 41: Size-class Distribution of UAs/towns of India*
classified under Artisan sub-type

Sl.No.	Size Class	No.	Pop.	%Pop.
I	100,000 and above	3	379536	16.63
II	50,000-99,999	9	624424	27.35
III	20,000-49,999	19	560410	24.53
IV	10,000-19,999	34	493909	21.64
V	5,000-9,999	28	210765	9.23
VI	Below 5,000	3	13691	0.60
	Total	96	2282735	100.00

* Excluding Jammu & Kashmir where, Census was not held in 1991.

These 96 UAs/towns as evident from Table - 42, were distributed in 12 major States out of which Uttar Pradesh had the maximum (27) followed by Tamil Nadu (21) and these 2 States accounted for 26% and 20% of the total population of such places. Apart from these, while the number of such places was also significant, i.e., 16 in Madhya Pradesh and 13 in West Bengal, the proportion of population living in such places was rather less i.e., 11 and approximately 16%. In addition to these 2 States, 9 UAs/towns of Andhra Pradesh also contributed for 14 p.c., of the population of the Artisan UAs/towns of India.

Table-42: Number and Population of UAs/towns classified under Artisan sub-type in India*

Sl.No.	State	No.	Pop.	%Pop.
	INDIA**	96	2282735	100.00
1.	Andhra Pradesh	9	326723	14.31

10.	Tamil Nadu	21	461711	20.23
11.	Uttar Pradesh	27	602687	26.40
12.	West Bengal	13	360601	15.80

* Excludes those States/Uts, where no UA/Town had atleast 1/4th of workers engaged in Artisan.

** Excluding Jammu & Kashmir where, Census was not held in 1991.

Considering the extent of variation in the percentage of workers engaged in artisan activities, it may be seen from Table 43 that in 27 out of 96 such UAs/towns, more than half of the workers were engaged in this activity. The maximum proportion was noted in Kotwa town of Uttar Pradesh where, slightly less than 9/10th of the workers were engaged in this activity. This was followed by Dhusaripara of West Bengal having approximately 83% of the workers engaged in such activity. Apart from these, in 5 towns this proportion was at least 3/4th. These are - Veparala (Andhra Pradesh), Mubarakpur, Lohta and Kurthi Jafarpur (Uttar Pradesh, and Chachanda (West Bengal). It would, however, be interesting to note that only one town (Maunath Bhanjan of Uttar Pradesh) out of these 27 UAs/towns had more than 1 lakh population and 2, namely, Mubarakpur U.A. of Uttar Pradesh and Aurangabad U.A. of West Bengal had more than 50,000 population each.

** Refers to New Town of 1991 Census.

IV. UAs/towns classified under Construction sub-type:

From the figures given in Table-44, it is evident that there were 15 UAs/towns only in India which had at least 25% of their workers engaged in this activity. Out of these 15 UAs/towns only 3 places, namely, Sundar Nagar (Himachal Pradesh), Tehri (Uttar Pradesh) and Farrakka Barrage Township (West Bengal) had more than 20,000 population each. As against these, 3 out of the remaining 12 such places had a population of less than 5,000 and the minimum (2,399) was found in Golphalbari (Bihar).

These places were distributed in 9 States (Including Delhi which till recently, was a Union Territory). Out of these, Madhya Pradesh and Maharashtra had a relatively large number of towns i.e., 3 each followed by Himachal Pradesh and West Bengal having 2 towns each.

Proportion of workers engaged in this activity amongst these towns was found to be quite large i.e., 3/4th and above Kevadiya (Gujarat) Rengali Dam Project Township (Orissa). This was followed by another 2 towns, namely, Golphalbari (Bihar) and Koradi (Maharashtra) which had at least half of their workers engaged in construction. Lastly, in 3 of the remaining 11 such towns, this proportion was more than 1/3rd. These towns are Tehri (Uttar Pradesh), Farrakka Barrage (West Bengal) and Pooth Khurd (Delhi).

SUMMARY AND CONCLUSION

Using the methodology as outlined in 'Introduction' all the 3,697 Urban Agglomerations/towns of India (excluding Jammu & Kashmir where, the census was not held in 1991) were classified into five broad functional categories viz., (I) Primary Activity (II) Industry, (III) Trade, (IV) Transport, and (V) Services by considering the percentage distribution of workers into these five categories. Besides, certain UAs/towns having at least one-fourth of workers in one of the four activities, namely, (a) forestry and fishing, (b) mining and quarrying, (c) artisan i.e., household industry, and (d) construction have been categorised in the respective sub-category. An analysis on distribution of number and population of UAs/towns classified under different categories as presented in preceding Sections (II to VIII) revealed following salient features in regard to size class distribution and inter-state variations :

I-a. Almost half of the UAs/towns were classified in the first category viz. 'Primary Activity'. But, the proportion of urban population living in such places was less than one-fifth.

I-b. As regards the size-class distribution of such places, it has been noted that most of these places had a medium or small town base with a major concentration in size-classes IV and V comprising UAs/towns having a population varying from 5,000 to less than 20,000. However, inspite of this large concentration, nearly one-fifth population of such UAs/towns falling under 'Primary Activity' category was found in cities and class II towns each having more than 50,000 population. Out of these, 19 UAs/towns had one lakh and more population.

I-c. Further, nearly two-third of such places were having mono-functional character as 40 p.c., or more workers were found to be engaged in this activity alone. Nearly, 60 p.c., of the population of all UAs/towns having 'primary activity' was contributed by these mono-functional UAs/towns. This was followed by one-fifth of UAs/towns accounting for more than one-fourth of population classified as multi-functional UAs/towns i.e., those having 60 p.c., or more workers in 'primary activity' and two other functions viz., 'industry-cum-trade' or 'industry-cum-services' etc.

I-d. Among the major States, the number of UAs/towns classified under 'primary activity' category was the maximum (371) in Uttar Pradesh only, but the proportion of urban population living in them was rather significant in Bihar (36 p.c.) followed by Andhra Pradesh and Madhya Pradesh each having approximately 24 p.c., of urban population classified under this category.

II-a. 723 UAs/towns had 'Industry' as the predominant or the leading function. These places accounted for almost half of the urban population.

II-b. A size class breakup of these places reveals that more than one-third of UAs/towns, were having 1 lakh or more population each and these places accounted for more than four-fifth population of the UAs/towns classified under 'Industrial' category.

II-c. As regards extent of functional diversification among these UAs/towns, it is observed that less than half of such places had 'mono-functional' character and these accounted for 41 p.c., of the population. Apart from this number of these places in 'bi-functional' category was though quite less, yet these accounted for almost an identical proportion of population.

II-d. Tamil Nadu among the major States, had the maximum number of 'Industrial' UAs/towns (101) followed by Uttar Pradesh(91), Gujarat (87). As against a comparatively small number of such places, the proportion of population living in such places in some of the major States such as Gujarat, Karnataka, Maharashtra, Tamil Nadu and West Bengal was quite large i.e., more than two-third. Moreover in West Bengal among these States, three-fourth of urban population was living in the UAs/towns having 'industry' as the predominant or the leading function.

III-a. 460 UAs/towns were classified in the next category of 'Trade' but these places comprised a very small proportion (7 p.c.only) of the urban population.

III-b. While the number of 'trading' UAs/towns was comparatively large in medium and small towns which together accounted for almost all such places, the proportion of population of these places was the maximum (i.e., about one-third) in size-class I having UAs/cities with 1 lakh and more population followed by next two size-classes which accounted for almost half of the urban population.

III-c. As regards the extent of functional diversification, it is noticed that more than half of such places accounting for more than two-third of the population of 'trading' UAs/towns had 'multi-functional' character. Besides these, one-third of such places comprising one-fourth of the population were having 'bi-functional' character or in other words, had one more function in addition to 'trade and commerce'.

III-d. Pattern of distribution of 'trading' UAs/towns revealed the fact that except Uttar Pradesh (which had 123 such places) their number was considerably less in all other States. Similarly, the proportion of urban population living in these UAs/towns was also considerably low i.e., less than one-fourth in all the major States except Assam, where, this was almost one-fourth.

IV. In the fourth category, viz. 'Transport' there were 22 UAs/towns only. An almost negligible proportion of (less than one p.c.) of urban population was classified under this category. Only one of these places viz., Kharagpur UA of West Bengal was having more than 2.5 lakh population followed by Mughal Sarai UA of Uttar Pradesh having more than 90 thousand persons. Apart from these two UAs, one each from Madhya Pradesh and Orissa had little more than 50 thousand persons living therein. Further, while 10 such places had 'mono' functional character another 10 had multi-functional character.

V-a. Lastly, 736 UAs/towns had 'Services' as the predominant/leading function and these accounted for more than one-fourth of the urban population. Thus, in terms of numbers, this category ranks after the first category i.e., 'primary activity' and in terms of population it ranks after the second comprising 'industrial' UAs/towns.

V-b. Though these UAs/towns were more or less evenly distributed in first five size-classes, the proportion of population of such places was the maximum (70 p.c.) in size-class I followed by another one-fourth living in next two size-classes.

V-c. As regards the extent of functional diversification among these places, it is observed that though the number of 'multi-functional' UAs/towns was comparatively large than the other two categories, the proportion of population of such UAs/towns was found to be large (approximately 43 p.c.) in the second i.e. 'bi-functional' category.

V-d. Number of UAs/towns with 'Services' as the predominant/leading function was the maximum in Uttar Pradesh (114) followed by Madhya Pradesh having 82 such places. Proportion of urban population living in such UAs/towns among the major States on the other hand varied from less than 10 p.c., in Karnataka and Tamil Nadu to more than 50 p.c., in Assam, Himachal Pradesh and Orissa and the maximum was noted in Himachal Pradesh (i.e., more than four-fifth).

A further probe into the functional sub-types of certain UAs/towns having a sizeable proportion i.e., at least one-fourth of workers were engaged either in forestry and fishing or mining and quarrying or artisan (i.e., household industry) or construction activities revealed that of a total 245 such UAs/towns, 96 were classified as mining and quarrying and another 96 were under 'artisan' sub-type. These were followed by 38 UAs/towns classified under 'forestry and fishing' and 15 under construction sub-types. It would be worth mentioning in this context, that a number of such UAs/towns had more than three-fourth of their workers classified under such activities.

To sum up, it may be stated that:-

1. while almost half of the UAs/towns of India had primary activity as their leading function the proportion of urban population living in industrial UAs/towns was approximately the same. Another one-fourth of urban population lived in UAs/towns classified under the last functional category namely, services. Out of the remaining two categories, while more than 400 UAs/towns having trade as their leading function accounted for merely 7 p.c., of urban population, only 22 UAs/towns having transport as the leading function accounted for a highly insignificant proportion i.e., less than 0.5 p.c., of the urban population.

2. As regards the size-class disparities, study reveals that a majority of the UAs/towns having primary activity as their leading function had either medium or small town base as against those having industry as their leading function which were either cities or large towns each having atleast 50,000 population. Further, the UAs/towns having services as the leading function which were more or less evenly distributed in the first five size-class categories.

3. The percentage of population of UAs/towns belonging to different functional types into these size-class categories shows that more than four-fifth of the population of industrial UAs/towns was classified under size-class-I comprising UAs/towns each having atleast 1 lakh persons. These were followed by UAs/towns having services as the leading function whose 70 p.c., of the population lived in such cities/UAs. Out of the remaining three functional categories, population of the UAs/towns having primary activity as the leading function was more or less evenly distributed in size-classes III and IV comprising UAs/towns (having a population within the ranges of 5,000 to 49,999) and these two size-classes accounted for 70 p.c., of the population of such places. A similar trend was noted in case of UAs/towns having trade as the leading function whose 80 p.c., population was accounted by first three size-class categories.

4. The extent of functional diversification was found to be quite conspicuous in case of UAs/towns having trade as the leading function as more than half of such places comprising more than two-third of the population were classified under multi-functional character. That is the place having 60 p.c., or more workers engaged in trade and two other functions. As against this, a majority i.e., approximately two-third of UAs/towns accounting for 60 p.c., of population of such places had primary activity as the leading function had mono-functional character i.e., those having at least 40 p.c., of workers engaged in this activity alone. Further though the UAs/towns having 'industry' as the leading function was more in 'mono-functional' category, the proportion of population of such places was almost equal in mono and bi-functional categories. Similarly, number of UAs/towns having services as the leading function was less in the bi-functional category but the proportion of population living in such places was the maximum followed by multi-functional

category. In other words, the population of service UAs/towns revealed a larger extent of functional diversification than that of the industrial UAs/towns.

5. As regards the distribution of UAs/towns in the States/UTs, it is seen that Uttar Pradesh accounted for the maximum number of UAs/towns having primary activity, trade and services as their leading functions. As against this, Tamil Nadu returned the largest number of 'Industrial' UAs/towns. The proportion of urban population classified under these categories, on the other hand, was quite large (i.e., more than one-third) in Bihar in case of Primary Activity, in West Bengal (75 p.c.) in case of industry, in Assam (25 p.c.) in case of trade and in Himachal Pradesh (75 p.c.) in case of service categories.

6. Lastly, 96 UAs/towns had mining and quarrying as their functional sub-type followed by another 96 under artisan, 38 under forestry and fishing and 15 classified under construction sub-types. A number of these UAs/towns were having more than two-third of their workers engaged in the respective sub-types and in some places this proportion was even more than three-fourth maximum (91 p.c.) was noted for Kirshnapura UKP Colony.
